L2 SIGNALS SERVICES — LEGAL Version 2026.11.2 Effective 2 November 2026

Trading Risk Disclosure

L2 Signals provides structured trading signals generated by a systematic, rules-based engine. Each signal may include a direction, entry price, order type, stop-loss, take-profit and recommended size. Trading financial markets involves substantial risk. This disclosure explains the principal risks and what subscribers should understand before executing any signal. Read it alongside the Subscription Terms, Signal Access & Delivery Policy and Performance Measurement Policy.

01 Purpose of this disclosure
02 Risk of financial loss
03 Past performance does not guarantee future results
04 No guarantee of signals or profits
05 Individual execution results may differ
06 Position sizing and risk management
07 Leverage and margin risk
08 Broker and execution risks
09 Economic news and unusual market conditions
10 Account size guidance
11 Signal expiry and instruction changes
12 Technology, data and service availability
13 Official performance and monthly measurement
14 Founding member extension is not a cash refund
15 No personalised financial advice
16 Subscriber responsibility
17 Acknowledgement of risk

Trading risk warning

Trading gold, forex, indices and other leveraged instruments can result in partial or total loss of trading capital. A stop-loss is a risk-management instruction, not an absolute guarantee of the exact exit price. Only trade with money you can afford to lose without compromising essential living expenses, financial obligations or other important commitments.

1. Purpose of this disclosure

By subscribing to or using L2 Signals you acknowledge that you have read and understood this disclosure and agree to use the service in accordance with its published terms and policies.

2. Risk of financial loss

You may lose money when executing an L2 Signals trade, even when the signal follows the strategy's rules. Market gaps, volatility, slippage, liquidity conditions, broker execution and other factors may cause a position to close at a different price from the intended stop-loss level. L2 Signals does not guarantee that your account remains profitable or that your capital is protected from losses.

3. Past performance does not guarantee future results

Historical backtests, forward tests, simulated results and previously completed signals can help evaluate a strategy, but cannot establish with certainty how it will perform in future conditions. Performance may change because of market structure, volatility, liquidity or price behaviour; differences between historical

data and live feeds; changes in spreads, commissions and swaps; differences between simulated and live execution; strategy limitations; and technical errors, data interruptions or unforeseen events. Any published statistics must be interpreted in the context in which they were measured — backtested results are not verified live results.

4. No guarantee of signals or profits

A valid trading opportunity may not occur on a given day, week or period, and the engine is not required to generate signals because subscribers expect activity. There may be periods with no new signals, consecutive losing signals, lower-than-expected win rates, reduced performance, or fewer qualifying setups. L2 Signals does not guarantee a minimum number of signals, a specific win rate, a minimum monthly return, a particular profit factor or a positive monthly result unless expressly stated in the applicable terms. A quiet period is not a reason to force trades outside the system.

5. Individual execution results may differ

The official performance of L2 Signals is measured using the signal engine and the Performance Measurement Policy methodology. Your personal results may differ because of executing after price has moved, using a different entry price or order type, failing to obtain a pending fill, slippage or wider spreads, a different broker or contract specification, changing position size, moving or removing a stop, changing a take-profit, delaying or ignoring a signal update or cancellation, closing manually before the stated exit, or different commissions and swaps. You are responsible for your own execution and account management. Personal differences do not change the official outcome; the official record and your account result are separate measurements.

6. Position sizing and risk management

L2 Signals recommends risking no more than 2% of your account balance on any single signal — a maximum permitted risk within the execution rules, not a recommendation to routinely risk 2%. A lower level may be more appropriate. Sizing must account for balance and available equity, entry price and stop-loss distance, instrument specifications and contract size, broker minimum and maximum lot sizes, leverage and margin, commission and spread, and applicable daily loss and drawdown restrictions.

A lot-size recommendation on a signal card is not guaranteed to suit every account or broker — verify the actual monetary risk before entering. If the smallest permitted position would exceed your risk limit, skip the trade. Never remove or widen a stop-loss merely to avoid realising a loss. Risk limits can reduce exposure but cannot eliminate the possibility of losses exceeding the intended amount under all conditions.

7. Leverage and margin risk

Leveraged trading lets a relatively small amount of capital control a larger position, amplifying both gains and losses. Adverse price movements may reduce equity quickly and lead to margin calls, forced liquidation, or losses greater than initially expected, depending on the instrument, broker and applicable protections. Understand your broker's leverage, margin, liquidation and negative-balance protection arrangements, and do not assume a recommended size or stop distance suits every leveraged account.

8. Broker and execution risks

L2 Signals does not control your broker's trading conditions or execution systems. Actual execution may be affected by bid/ask spreads and widening, slippage and price gaps, delayed processing, rejected or unfilled orders, platform outages, differences in pricing and contract specifications, commissions and swaps, and

broker-specific restrictions. A signal may be valid under the engine's methodology while you experience a different result because of broker-side conditions. Do not assume displayed prices are always available in your own account.

9. Economic news and unusual market conditions

Economic announcements, central-bank decisions, geopolitical developments and unexpected events can cause sharp or irregular moves. During such periods spreads may widen, execution may deteriorate, and stop orders may fill at prices different from those expected. Follow any published signal restrictions, cancellations and expiry instructions, and applicable broker or prop firm news rules. Where a signal is cancelled or an instruction changes, you are responsible for following the latest official update. L2 Signals does not guarantee that a signal complies with every prop firm's individual rules.

10. Account size guidance

Above US$1,000	US$500–US$1,000	Below US$500
Recommended for more comfortable execution, particularly on prop firm accounts.	Supported where you can follow the sizing rules without exceeding your risk limit.	A cent account supporting smaller position sizes may be worth considering.

These figures are guidance, not guarantees of suitability, profitability or protection. The appropriate size depends on the instrument, broker specifications, stop distance, minimum lot size, leverage and your circumstances. A larger account does not guarantee profits, and a smaller account does not make a trade safe simply because the monetary position is smaller.

11. Signal expiry and instruction changes

Follow the order type and instructions published for each signal. Under the current Signal Access & Delivery Policy the daily cutoff is 21:00 UTC, subject to any more specific time on the individual signal card. Close open trades and cancel relevant pending orders by the applicable cutoff. Expired signals must not be carried into the next trading day unless an official policy or signal instruction expressly provides otherwise. Monitor official updates, including changes to entries and cancellations; failing to follow them may produce results that differ from the official outcome.

12. Technology, data and service availability

Signal generation and delivery may depend on market-data feeds, platforms, servers, connectivity, software and communication services, which may experience delays, interruptions, inaccurate data, outages or failures. Such events may affect the timing, availability or accuracy of a signal. L2 Signals makes reasonable efforts to address issues but cannot guarantee uninterrupted availability. Do not assume a signal has been delivered, updated or cancelled unless you have access to the relevant official communication. Where a material error is identified, L2 Signals may correct a record, issue a clarification, suspend delivery, or take other reasonable steps.

13. Official performance and monthly measurement

Official performance is calculated from the signal engine and the Performance Measurement Policy. Official monthly net R is measured by calendar month; signals open at the cutoff are tracked until finalised. Official performance is not a promise that every subscriber achieves the same return. Review the methodology

accompanying published figures and avoid relying on a single statistic, short period or limited number of trades as proof of future profitability.

14. Founding member extension is not a cash refund

Eligible founding members may qualify for one additional month of access in relation to the calendar month in which their first paid subscription period begins, when the official net R for that calendar month is below zero. This benefit is an extension of service access, not a cash refund; is assessed using official performance rather than personal account results; applies only once and only under the stated conditions; does not reimburse personal losses or broker charges; and does not guarantee that a subsequent month will be profitable.

15. No personalised financial advice

L2 Signals provides systematic signals and related service information. Its signals are not a personalised assessment of your financial position, objectives, experience or risk tolerance. You are responsible for deciding whether to trade, whether the service is appropriate for you, and whether you can tolerate the associated risks. Nothing in this disclosure is a guarantee of profit or a substitute for independent professional advice.

16. Subscriber responsibility

By using L2 Signals you acknowledge responsibility for understanding the risks of the instruments; reviewing the published signal and instructions before execution; verifying position size and monetary risk; complying with your broker and prop firm rules; monitoring open trades and expiry times; following official updates and cancellations; maintaining your own records; deciding whether to execute, skip or stop trading a signal; trading only with capital you can afford to lose; and seeking independent professional advice where necessary. Do not trade solely because you expect a particular profit or monthly result.

17. Acknowledgement of risk

By subscribing to or using L2 Signals you acknowledge that trading involves a real possibility of financial loss; historical performance does not guarantee future results; signals may lose and there may be extended periods without profitable outcomes or without any signals; your personal results may differ from official performance; risk-management measures cannot eliminate all trading risk; you are responsible for your own execution and account management; the founding-member extension is a service-access benefit and not a cash reimbursement; and you have had the opportunity to review this disclosure and the other applicable policies. If you do not understand these risks or cannot tolerate the possibility of losing the capital you trade, you should not execute the signals.
